

# DLF2120F

## FLEXO PLATE MAKING MACHINE

Easy  
plate  
making

▶ Designed for narrow web flexographic printing applications

### Body

The whole machine is made of stainless steel and is resistant to acid and alkali. The external water circulation filtration system keeps the detergent clean and saves water.

### Exposure

Imported PHILIPS lamp tube heat dissipation design is adopted, which makes the lamp tube light source stable and prolongs its life. The height of the light source can be adjusted to achieve the optimal exposure of the plate, which perfectly presents the image.

### Plate wash

The transmission of the washing platform is specially designed to be quiet and stable. The brush is special nylon bristles imported from Japan, which are durable and not easily deformed. The cleaning brush can be adjusted in height to achieve the best brush pressure, and the resin is cleaned evenly and perfectly imaged (175Lpi, 1% dot)

### Drying

The double-layer drying drawer adopts high-efficiency hot air constant circulation, so that the plates can be dried evenly and not easy to crack.

### Post exposure / Detaching

It can save time and improve efficiency at the same time.

Multifunctional,  
all-in-one,  
save place

The whole machine is made of stainless steel and is resistant to acid and alkali.

Maximum  
plate size :  
**510 x 600mm**

The external  
water circulation  
filtration system

 Machine Specification

Model	Size of machine	Maximum plate size	Weight	Power
<b>DLF-2120F</b> Flexo plate making machine	940 × 960 × 960 mm	510 × 600 mm	240kg	220V / 60Hz

Model	Size of machine	Water capacity	Weight	Power
<b>F-70</b> Water circulation filtration system	940 × 260 × 680 mm	70 L	42kg	220V / 60Hz

Exposure light source can be adjusted

The washing brush can be adjusted in height

Dry high-efficiency hot air constant circulation

Post-exposure and Detaching can be performed at the same time

Exposure / Plate wash / Drying / Post exposure / Detaching
